“Our goals are  
to provide all our patient  
with exceptional dental care and  
to fulfill our patient's expectations and  
dreams of having a **healthy, beautiful smile.**

Implant Akademi is located right next to the Palace of Justice in the center of Istanbul, Turkey. It was founded by Maxillofacial Surgery Expert Dr. Özgür Öztürk. Since its inception in 2013, Implant Akademi has been using the most advanced technology and giving boutique service at international standards. In 2017, Implant Akademi opened the second clinic in Levent and continues to grow. Our goals are to provide all our patients with exceptional dental care and to fulfill our patients' expectations and dreams of having a healthy, beautiful smile.

We offer large appropriate equipment and our doctors and specialists know exactly how to help our patients get the highest quality treatment. We have 5 general dentists, 2 esthetic and prosthetic specialists, 1 oral surgeon, 2 periodontologists and 2 orthodontic specialists. On Implant Akademi we have technologically donated 9 dental clinic rooms, 2 oral surgery room, 2 radiology room (includes panoramic radiograph), one photograph studio and 2 sterilization room. The main core of our dental team has been working for more than 3 years together including the dentists and the dental technicians, therefore efficiency and quality have been maximized. To secure good connections, we have 3 translators speaking Arabic, Russian and English fluently. Besides that, almost all our doctors can speak English and can good communication with English speaking patients. We have 7 exceptionally trained dental hygienists.

We are treating on average 300 patients per month with the most difficult and challenging dental problems, therefore we have gained a significant advantage and routine against other smaller sized dental clinics. We are providing the best guarantee policy towards our patients because our ongoing quality level enables us to do so. We have just placed our 9000th dental implant successfully.

Professional Interests: Aesthetic dentistry, Temporomandibular joint disorders, Implant prosthetic treatments.

Aesthetic dentistry has offered the patient therapeutic options in the restorative field. For example, dental fillings are the most common treatment for decayed teeth.

Aesthetic dentistry has several advantages in terms of accelerating the healing process and improving the comfort of the patient by using technologies such as laser in some clinical stages.

Nowadays, the Orthodontics department treats not only teeth but also lower and mid-face irregularities. Orthodontics examines the position of the lower and upper jaw with respect to the head base and each other also, the relations of the teeth in three dimensions.

In spite of preventive medicine practices and developing medical facilities, tooth losses occur due to tooth roots and periodontal diseases. At this point, implantology is a popular alternative treatment in today's dentistry.

This soft tissue called “pulp” contains blood vessels, nerves and connective tissue, and helps to grow the channel of your tooth at the stage of tooth development and no longer needs a tooth development after the tooth has fully developed.

Pedodontics is a branch of dentistry where the treatment of caries, traumas or hereditary deformations that may occur in milk and permanent teeth between 0-13 years of age and preventive dentistry treatments for newly emerging teeth.
